484 statement (Voegelin, 1935 b, 221). Within Tüba-
487 tulabal area trails lay chiefly along ridges.

Marriage statistics for last 80-90 yrs. also
582 give indications of groups with whom there has
648 been intimate contact;-98 marriages recorded of which there were 17 Tübat.-Tübat.; 7 Tübat.-Palagewan; 2 Tübat.-Bankalachi; 7 Tübat.-Owens Valley Paiute (several relatively recent); 6 Tübat.-Koso; 14 Tübat.-Kawaiisu; 12 Tübat.-Yokuts, mainly Tejon Yokuts; 4 Tübat.-Chumash; 1 Tübat.-Yaqui; 18 Tübat.-white (Mexicans, Frenchmen, Americans).

439 From Chumash, Tübatulabal obtained shell
422 money, shell cylinders, steatite, probably, and in later times horses; these exchanged for
437 piñons. They also took advantage of trading trips to Chumash to collect lumps of asphalt from beach and to fish in ocean. Occasionally Chumash made reciprocal visits. In trading, "a sack of piñons was left on the ground; the Ventureños came up, and took as many as they wanted, and laid shell money down in payment" (SM). No bargaining; goods had fixed price (see below). Shell money, certain varieties of acorns obtained from Yokuts (Monilabal), in exchange for piñons.

439 In fall of 1932 SM and MM visited Northfork
484 Mono on trading trip (Voegelin, 1935 b, 239).

Dried meat mentioned most frequently as com-
439 modity traded intratribally, in winter especially;
773 in myth Coyote buys meat with shell money (Voegelin, 1935 b, 199). Yellowhammer bands another trade article within tribe.

436 Currency.- Clamshell disks (tugumba·l) standard currency; disks kept strung on native twine, strings coiled and stored in money jars (see section on Basketry) or, if person had large quantity currency she hid part of it away in skin sacks. Perforated shell cylinders (hobo·apun), which like disks were obtained already made up from Chumash, came in 2 sizes; used chiefly for necklaces, nose plugs, but sometimes kept in money jars, served as currency. Olivella shells,
[825] haliotis shell known, but not used for currency; dentalium unknown to informants.

Smallest unit of measure in clamshell currency was ya·ŋgil, double length of index finger or about 8 in. Standard unit (ki·la·hil) measured twice around circumference of palm and fingers, about 45 in.; this also known as hištɨh; cf. Yokuts, hista, Chumash stü, for string this length (Kroeber, Handbook, 565).
435 Largest unit (pu·wil) was 16-hištɨh string, about 45 ft. In terms American money, ya·ŋgil = 1 cent, hištɨh = 10 cents, pu·wil = $2. Informants realized 16-hištɨh string or pu·wil should have been equated to $1.60. Shell cylinders 3 in. long worth one hištɨh; those 5 in. long double.

Woman's sifter worth 8 hištɨh ($1); whole deer, yellowhammer quill band pu·wil ($2); horse, 70 yrs. ago, 5 pu·wil ($10). In 1932 10-lb. bag of chia seeds offered to SM for $2, which was "too high" (SM); plugs, balls of tobacco were selling for $3.
